

 **Electronic thermostats**

These electronic surface sensing and ambient thermostats provide accurate control for all approved heating cables.

The enclosure, electronics and sensor cable are approved to the requirements of EN 50 014, EN 50 019, EN 50 020 and EN 50 028. The thermostats can be supplied at nominal voltages of either 110V 50/60 Hz or 230V 50/60 Hz and have a double pole switch rated at 16 A.

The switch contacts can be arranged to be volt free. Temperature setting is accurate via digital thumb wheel switches inside the enclosure.

The surface sensing version is supplied with a Pt 100 sensor and a 2 m long stainless steel sheathed extension cable giving freedom to locate the electronics remote from the sensor. The ambient version is supplied with a local Pt 100 sensor and a wind shield.

The enclosure is manufactured from high impact resistant glass filled polyester offering IP66 protection. Two M20 and one M25 entries allow a combination of power cable and heating cables to be connected to the units.

For maximum pipe temperatures up to 215°C, the units can be mounted on the pipe using a support bracket.
